

Word of Mouth

New year, new healthier you?

Winter 2019

With all the conflicting information out there, it's really hard to know what to do to lead a healthier life.

Have your 5 a day - but don't eat too much fruit because it's full of sugar. Cut down on alcohol - but a small glass of red wine a day is ok. Don't indulge in chocolate - but a square of dark is good for you. Reduce caffeine - but a cup of coffee a day is good for your heart. Who knows what's true!

Every day there seems to be new advice. So, we have come up with three simple changes that will help keep your mouth tip top - and as we know, a healthy mouth reflects a healthy body.

Tooth-kind drinks

There are two - milk and water. Simple. This includes dairy-free milk alternatives that are calcium enriched too. Drink smart to help protect tooth enamel - and have less fruit juice until you feel you can cut it out.

OPEN EVENING

Please join our free seminar on dental implants at Phyllis Court in Henley at 6.30pm on Tuesday 5th February 2019

All welcome
Refreshments provided

Love your gums

Brush twice a day for two minutes with fluoride toothpaste and floss before brushing. Flossing loosens bacteria and food debris from between your teeth, which allows brushing to be much more successful at removing plaque. Doing so will lower your risk of gum disease, which has been linked to more than 20 serious conditions including heart disease, bacterial lung infections, strokes, diabetes and problems with fertility and pregnancy.

Regular dental visits allow us to spot gum

disease early, so make sure you book your essential dental and hygiene appointments.

Cut down on sugar

Sugar causes tooth decay. It is not just the amount of sugar in food and drink that matters but, more importantly, how often there are sugary things in the mouth. Sweet drinks (especially those in a bottle or with a sports cap), sweets and lollipops are particularly bad because the teeth are bathed in sugar for a considerable time. If you do have sugary treats, eat them with your main meal rather than between meals.

Are dental implants right for you?

Dental implants can help to restore smiles by providing a solution to missing teeth and look, feel and work like your own. An artificial root made from titanium replaces the root of a missing tooth and over time fuses with your jawbone.

Implants can also be used to anchor bridges and dentures - allowing you to eat with ease. For many people, dental implants can last many years, providing welcome relief from the noticeable signs of ageing that premature tooth loss can hasten. They blend naturally with your remaining teeth, without damaging them.

Our principal dentists Stephen Rees and Andrew Chandrapal (pictured) have successfully placed more than 1,000 implants over the last 16 years and

accept referrals for implants from many different practices locally.

We offer free of charge consultations for anybody interested in seeing if implants are suitable for them.

Please speak to our practice manager Penny on 01628 327030, who will be happy to help you or answer any questions you may have.

Spotlight on - denture care

1

BRUSH YOUR DENTURES DAILY

Use a non-abrasive cleaner, not toothpaste

2

SOAK YOUR DENTURES DAILY

Use a denture cleanser to remove more plaque and disinfect your dentures

3

LEAVE YOUR DENTURES OUT AT NIGHT

Helps to relieve any soreness and prevent infection

4

VISIT YOUR DENTIST REGULARLY

Ensures your mouth remains healthy

1. Daily cleaning of dentures using mechanical action – brushing with a toothbrush or denture brush and an effective, non-abrasive denture cleanser (no dentifrice).

2. Daily soaking in a denture-cleansing solution – this seems to deliver extra chemical breakdown of the remaining plaque and some level of disinfection of

the denture. Denture-cleansing solutions should only be used outside the mouth, and denture wearers should strictly follow the manufacturers' guidelines.

3. Denture wearers should not keep their dentures in the mouth overnight, unless there are specific reasons for keeping them in. This guideline is even more important for people at a higher risk of

developing stomatitis and for frail or institutionalised older people. Soaking in a denture cleanser solution after mechanical cleaning seems to be beneficial for preventing denture stomatitis and the potential risk of pneumonia.

4. All patients who wear removable dentures should be enrolled into a regular dental recall and maintenance programme.

'2 billion people aged over 60 by 2050'

By 2050 there are expected to be two billion people aged 60 or older. This is more than double today's figure. The older you are, the more likely you are to have lost all, or nearly all, your natural teeth. This is why we recall you every 6 to 12 months, because your natural teeth are precious.

A global taskforce of academic experts brought together by the Oral Health Foundation has announced new guidelines (above) to address the needs of an ageing population worldwide and tackle the wealth of inconsistent and contradictory advice on the best care of dentures.

Dr Nigel Carter OBE, Chief Executive of the Oral Health Foundation believes the new guidelines will help end confusion about how dentures should be looked after.

Dr Carter says: "We have found that people

with dentures do not know how they should be cleaning them. Our report shows that denture wearers use everything from soap and water to toothpastes, bleaches and commercial products. But with the variety of recommendations available online and from other sources, it is no surprise that people are confused.

"Incorrect denture care can pose a real threat to both the oral health and general health of denture wearers. We hope these new recommendations can reassure people about the best way to look after their dentures."

The risks associated with poor denture care are wide-ranging and include inflammation of the mouth, staining, changes in taste and bad breath. It has also been linked to wider health problems such as pneumonia, particularly in the frail elderly.

Practice news

Extra spaces

We have listened to you! Although we can't increase the footprint of the practice to increase parking we have removed our shed and car port creating 4 extra parking spaces plus new more efficient lighting!

It's a boy!

Congratulations to our dentist Grace Kelly on the birth of her son, Niall. Grace will be returning after a short period of maternity leave.

Welcome aboard

Welcome to Saba, our new dental therapist hygienist. Saba will be providing a hygiene therapy service every Saturday as well as in the week. And due to the expansion of the practice we also welcome 2 new qualified nurses, Demi and Gemma, who have already integrated really well with the team.

Elf Day success

Our Elf Day raised over £50 for the Alzheimer's Society. Thank you to all of you who donated.
